

NebulaOps v22.4 Technical Release

Architecture Infrastructure

Professional technical package summary for the v22.4 delivery. This document uses v22.4 release references only.

Area	Description
Scope	NebulaOps v22.4 preserves the existing microservice and micro frontend layout while adding TASK Kanban operations and Identity Admin integration with Keycloak and Redis-backed list caching.
Runtime topology	The stack keeps the Angular shell, independently served classic micro frontends, Spring Boot gateway/services, RabbitMQ eventing, Redis cache, MongoDB persistence, Keycloak identity provider, Prometheus and Grafana observability.
v22.4 additions	The task-service now exposes Kanban move operations and enriched assignment events. The auth-service exposes realm-scoped Keycloak administration APIs and invalidates Redis caches after mutations.

Release version: 22.4.0

Package label: NebulaOps v22.4
