

NEBULAOPS v22.3 FINAL

Release Notes & Closure Report

Final release notes, closure status, validation evidence and handover commands for NebulaOps v22.3.

53

compose services

13

micro frontends

18

backend modules

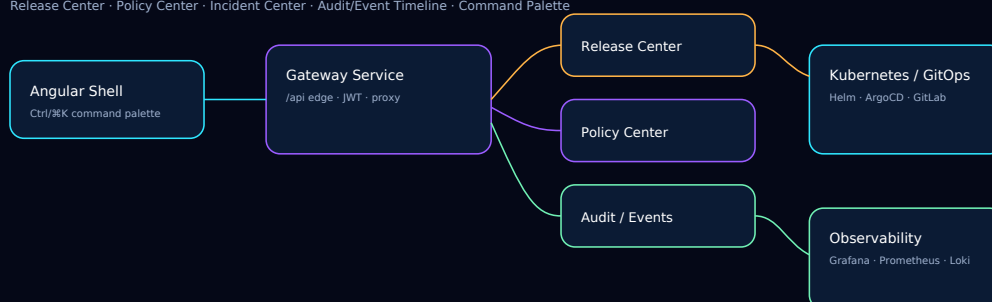

53

scripts

Professional release closure package - prepared for technical review, handover and local validation.

NebulaOps v22.3 · Operational Intelligence & Governance Layer

Release Center · Policy Center · Incident Center · Audit/Event Timeline · Command Palette

Reference figure - NebulaOps v22.3 platform topology.

1. Release closure overview

NebulaOps v22.3 is closed as the Operational Intelligence & Governance Layer. The release expands the existing v22.2 platform without removing the previous toolchain, micro frontends, backend services, security stack or observability plane. The package is designed for local WSL/Docker validation and professional technical handover.

Area	Final status	Evidence
Frontend shell	Closed	Angular production build PASS; 13 remotes registered
New v22.3 remotes	Closed	INFRA Hub, Release Center, Policy Center, Notification Center build PASS
Backend expansion	Closed at source level	Release, Policy, Audit and Notification APIs included
Gateway integration	Closed	Proxy routes, /api/docs and notification SSE endpoint added
Documentation	Closed	Final PDFs, runbook, release notes, implementation summary and build report included

2. Added capabilities

Capability	Artifact	Port/API
Release Center	MFE + release-orchestrator-service	4221 / 8098
Policy Center	MFE + policy-governance-service	4222 / 8100
Notification Center	MFE + notification-service SSE/preferences	4223 / /api/notifications/*
Audit/Event Timeline	audit-service + gateway routes	8101 / /api/events
AI Ops Incident Center	incident endpoints	/api/ai-ops/incidents/*
DevSecOps expansion	scan/SBOM/report endpoints	/api/devsecops/*
FinOps expansion	forecast/budget/anomalies/recommendations	/api/cost/*
Kubernetes expansion	events, graph, diff/apply, stream contract	/api/kubernetes/*

3. Build and validation status

Frontend builds executed successfully in the generation environment:

```
- frontend PASS
- frontend/remotes/infra-hub PASS
- frontend/remotes/release-center PASS
- frontend/remotes/policy-center PASS
- frontend/remotes/notification-center PASS
```

Static validations:

```
- JSON/YAML/XML PASS
- scripts/validate-package.py PASS
- duplicate Docker host ports none
- Java structure sanity PASS
```

4. Local finalization commands

```
cd nebulaops-v22.3-final
./scripts/wsl/upgrade-to-v22.3.sh
./scripts/wsl/stop.sh
mvn -f backend/pom.xml clean package -DskipTests
docker compose -f docker-compose.yml config
docker compose build
./scripts/wsl/start.sh --with-sso-proxy
./scripts/wsl/health.sh
./scripts/wsl/smoke-v22.3.sh
```

Maven and Docker must be executed on the target WSL/Docker host; they were not available in the PDF generation environment.
