

NebulaOps v22.4 Technical Release

Backend Api

Professional technical package summary for the v22.4 delivery. This document uses v22.4 release references only.

Area	Description
Task API	Task endpoints include create, list, delete and PATCH move operations. Move requests update the task workflow status and publish an assignee-aware notification event.
Identity API	Gateway routes <code>/api/identity/realms/{realm}/users</code> , <code>/groups</code> and <code>/roles</code> to auth-service. Create, update and disable operations are supported for user administration.
Cache behavior	Keycloak list responses are cached in Redis with realm-aware keys. Mutations clear the affected list cache to avoid stale administration screens.

Release version: 22.4.0

Package label: NebulaOps v22.4
